Education

Abdul Kalam Technical University — Uttar Pradesh
Bachelor of Technology in Computer Science Engineering (CGPA: 8.6/10) — *Expected 2027*

Work Experience

AI Automation Engineer Intern — November 2025 – February 2026
The Ladder — *Gurugram ,India*

- Optimized legacy automation scripts through code refactoring and algorithmic improvements, reducing execution time by **93%** from **4 hours to under 20 minutes**.
- Architected a high-performance **Python-based scraping pipeline** using parallel processing to extract data from **1,000+ companies**, cutting processing time from **8 hours to 25 minutes**.
- Developed intelligent agents using **LangChain** and **LangGraph** to automate multi-step reasoning, integrating **n8n** workflow transitions and automated data-cleaning pipelines for high-integrity AI datasets.

Projects

AlgoVerse - Advanced DSA Platform | *React.js, Tailwind CSS, Node.js, C++* — March 2026 – Present

- Building a content-driven platform to provide high-quality, in-depth explanations of advanced DSA topics (DP and Graph) and Competitive programming (around 50+ problems solution).
- Designing and implementing intuitive page layouts for complex topics, including code snippets, visual diagrams, and step-by-step problem breakdowns.
- Using reusable React components and Tailwind CSS for a fully responsive, professional UI.

PennyWise – Personal Finance Management App | *MERN* — September 2025 – October 2025

- Built a full-stack MERN expense tracker with JWT authentication and bcryptjs password hashing, supporting secure user registration, login, and session management.
- Designed an interactive React dashboard with Recharts (pie + bar charts) for real-time balance summaries, category-wise breakdowns, and 30/60-day spending trend analytics.
- Developed 5 RESTful API modules (auth, dashboard, income, expense, reports) with input validation, error handling, and Excel .xlsx export for transaction data.

ChessGame – PvP Chess Engine | *C++, SFML* — July 2025 – August 2025

- Developed a fully functional PvP chess game in C++ using SFML, implementing move validation across all 6 piece types with an 8×8 rendered board and interactive GUI.
- Engineered game-state detection for 3 terminal conditions (check, checkmate, stalemate) using an OOP architecture with 8 modular classes.
- Deployed the playable build on itch.io with piece highlighting, turn indicators, and restart functionality for a complete end-to-end user experience.

Achievements

- Achieved a **LeetCode rating of 1900+ (Knight Badge, Top 5% globally)** with over **650+ problems solved** across core DSA topics such as Dynamic Programming, Graphs, and Trees.
- Recognized as a **Super Contributor in Hacktoberfest 2025**, ranking among the **Top 10,000 contributors globally** and successfully merging **10+ PRs** into organizations including **Nixopus, Vanilla-Verse, and Doticons**.
- Rated **1200+ on Codeforces** and participated in **25+ rated contests** across Codeforces, LeetCode, and HackerRank.

Technical Skills

Languages: C/C++, JavaScript, HTML/CSS, Python, Solidity
Frameworks and Libraries: React.js, Node.js, Express, MongoDB, Tailwind CSS, Ethers.js, LangChain, LangGraph
Developer Tools: VS Code, Git, GitHub, Postman, npm, Remix IDE, Hardhat, n8n, Zapier, Foundry
CS Fundamentals: Data Structures and Algorithms, Operating Systems, System Design
